**01 • INTRODUCTION**

# Introduction

---

WOFF-Y (\$WOFF-Y) is a community-first token launched on the Solana blockchain via the Pump.fun bonding-curve platform. The project is built around three ideas: a friendly, globally accessible community, fully transparent on-chain mechanics, and a roadmap that gradually introduces utility through staking, NFTs, and community governance.

This document provides an overview of the project: its vision, token details, tokenomics, how to buy, the phased roadmap, and the ecosystem being built around the Woffy brand. It is written as a reference for community members and anyone who wants to understand how WOFF-Y works before participating.

## Why Solana

Solana offers sub-second settlement and transaction fees typically measured in fractions of a cent, which makes it well suited to community-driven tokens and high-frequency user activity. Building on Solana means WOFF-Y holders can trade, transfer, and interact with the ecosystem without the friction of high gas fees.

## Why Pump.fun

Pump.fun is a standardised launch platform on Solana that uses an automated bonding-curve liquidity model. Every token launched on Pump.fun follows the same rules: a fixed supply, no mint authority, no custom tax, and automatic liquidity. Once a token's bonding curve reaches approximately \$69,000 in market capitalisation, it graduates to PumpSwap, where liquidity is locked and trading continues on a standard AMM.

## 02 • VISION &amp; MISSION

# Vision & Mission

---

## Vision

To build one of the most welcoming, transparent, and globally distributed communities on Solana — a place where holders of WOFF-Y are participants, not spectators, and where the token acts as a simple, fair coordination layer for a shared culture.

## Mission

Deliver a token that is easy to understand, easy to hold, and easy to join. Keep the contract open-source and verifiable. Give the community real tools to shape the project, starting with governance and expanding into staking and an NFT ecosystem. Use the project's visibility to support real-world causes, beginning with street dogs worldwide.

## Core Principles

- **Community first.** Holders make the decisions that matter.
- **Transparency by default.** Open-source contract, locked liquidity, public roadmap.
- **Low friction.** Solana's speed and fees make participation accessible worldwide.
- **Utility over hype.** Features ship in phases, not promises.

## 03 • TOKEN DETAILS

# Token Details

WOFF-Y follows the standard Pump.fun token configuration. All parameters are fixed at launch and cannot be modified by the team.

Field	Value
<b>Name</b>	WOFF-Y
<b>Ticker</b>	\$WOFF-Y
<b>Network</b>	Solana
<b>Standard</b>	SPL Token (Pump.fun)
<b>Total Supply</b>	1,000,000,000 (1 Billion)
<b>Decimals</b>	9
<b>Buy / Sell Tax</b>	0% / 0%
<b>Mint Authority</b>	Revoked (fixed supply)
<b>Liquidity</b>	Bonding curve → PumpSwap (locked)
<b>Graduation Threshold</b>	~\$69,000 market cap
<b>Contract Status</b>	Open source, audited, liquidity locked

Because WOFF-Y uses the Pump.fun standard, there is no hidden tax, no rebasing, and no privileged mint function. Supply is capped at one billion tokens from inception.

## 04 • TOKENOMICS

# Tokenomics

WOFF-Y uses the Pump.fun fair-launch model. There is no pre-sale, no private allocation, and no team reserve held outside of public on-chain addresses. All tokens enter circulation through the bonding curve, meaning the earliest and latest buyers interact with the same transparent pricing mechanism.

## How the Bonding Curve Works

- Every buy on the bonding curve mints tokens at a formula-driven price that rises as supply is bought up.
- Every sell burns tokens back into the curve at the corresponding price point.
- Liquidity is provided automatically by the curve itself — no manual market-making is required.
- When the token reaches approximately \$69,000 in market capitalisation, remaining liquidity graduates to PumpSwap and is locked.

## Supply Distribution

Because WOFF-Y is launched through the Pump.fun bonding curve, 100% of the supply is available to the public market. There is no allocation reserved for insiders at launch.

Allocation	Share	Notes
Public market (bonding curve)	100%	Open to all buyers from block zero
Team / Pre-sale	0%	No pre-allocation
Locked liquidity (post-graduation)	—	Locked on PumpSwap at ~\$69K MC

## Fees

WOFF-Y itself has a 0% buy and 0% sell tax. The only fees paid by users are standard Solana network fees and the small platform fees charged by Pump.fun or PumpSwap on the trade itself. There is no transfer tax on peer-to-peer sends.

## 05 • HOW TO BUY

# How to Buy WOFF-Y

Buying WOFF-Y is designed to be simple for first-time Solana users. The five steps below walk through the full process from setting up a wallet to receiving tokens.

1

**Download Phantom Wallet**

Install Phantom from [phantom.app](https://phantom.app) or your app store. Phantom is a non-custodial Solana wallet available as a browser extension and mobile app. Write down your recovery phrase and keep it offline.

2

**Get SOL from an Exchange**

Buy SOL on any major exchange such as Binance or Coinbase, then withdraw it to your Phantom wallet address. SOL is used both to purchase WOFF-Y and to pay Solana network fees.

3

**Open Pump.fun and Connect Wallet**

Go to [pump.fun](https://pump.fun) and click 'Connect Wallet'. Approve the connection request in Phantom. After graduation to PumpSwap, the same steps apply on the PumpSwap interface.

4

**Search for WOFF-Y**

Search for 'WOFF-Y' or paste the official contract address published on [woffysol.com](https://woffysol.com) and the project's verified social channels. Always confirm the contract address before trading.

5

**Buy & Join the Pack**

Choose the amount of SOL to swap and confirm the transaction in Phantom. Your WOFF-Y balance will appear in your wallet within seconds. Join the Telegram and X channels to connect with the community.

## 06 • ROADMAP

# Roadmap

WOFF-Y's roadmap is divided into four phases. Each phase focuses on a single objective so that progress is visible and measurable to the community.

**PHASE 1****Community Building**

Build the WOFF-Y community with advertising agencies and establish a lasting social media presence across Telegram, X, and supporting channels. Lay the groundwork before any on-chain launch.

**PHASE 2****Launch on Pump.fun**

First launch on Pump.fun, leveraging the platform's standardised contract and automatic liquidity. Support growth through transparent influencer partnerships and community-led promotion.

**PHASE 3****Ecosystem**

Launch the Woffy NFT collection, a staking platform, and an on-chain governance system. Reward long-term holders and stakers with governance weight and ecosystem benefits.

**PHASE 4****Global Impact**

Pursue exchange listings and scale the brand globally. Run a major campaign supporting street dogs worldwide, turning community attention into measurable real-world impact.

Roadmap items are directional and may evolve based on community feedback and market conditions. Delivery timing is not guaranteed.

## 07 • COMMUNITY &amp; ECOSYSTEM

# Community & Ecosystem

WOFF-Y is designed to be more than a token. The surrounding ecosystem gives holders reasons to participate and tools to shape the project.

**Community First**

Decisions are made by the community. Governance token holders shape the future of the project.

**Fast & Cheap**

Transact on Solana in seconds. Buy, sell, and transfer with near-zero transaction fees.

**Safe & Transparent**

Smart contract code is open source and audited. Liquidity is locked after graduation to PumpSwap.

**Stake & Earn (Coming Soon)**

Stake your tokens and earn passive rewards. Longer-term stakers will receive higher weights.

**NFT Ecosystem (Coming Soon)**

The Woffy NFT collection introduces collectible dog characters with ecosystem privileges for holders.

**Global Community**

Connect with Woffy enthusiasts from every corner of the world through Telegram, X, and community events.

**This document is for informational purposes only and does not constitute financial advice. Always do your own research.**

Nothing in this whitepaper should be interpreted as a recommendation, solicitation, or offer to buy or sell any digital asset. WOFF-Y is an experimental community token launched on the Pump.fun platform on the Solana blockchain. Participation in any cryptocurrency carries significant risk, including the possible total loss of the amount you commit.

No price predictions, guaranteed returns, or investment outcomes are implied anywhere in this document. Any forward-looking statements regarding roadmap phases, features, integrations, partnerships, or exchange listings represent current intentions only. Timing, scope, and delivery may change, be delayed, or be cancelled without notice, based on community feedback, technical constraints, regulatory developments, or market conditions.

Cryptocurrency regulation varies by jurisdiction. It is the reader's responsibility to ensure that participating in WOFF-Y is permitted under the laws of their country or region. The project team, contributors, and affiliates accept no liability for any loss, damage, or claim arising from the use of this document or from interaction with the token or any related smart contract.

Before transacting, readers should independently verify the official contract address, review the open-source smart contract code, read the third-party audit, and confirm liquidity status. Only interact with links and contract addresses published via the official channels listed in this document.
